Traditional With-Profits (TWP) fund factsheet

Quarter one 2024

Fund description

Traditional With-Profits (TWP) covers a range of non-unitised Life products such as Whole of Life, SEMPLAN and LSMPLAN (“low-cost” mortgage endowment plans) and Pension products such as RAW (individual retirement annuity plan), EXSEL and SEL (occupational pension schemes). With the exception of new members to existing occupational pension schemes, these products are no longer open to new business.

TWP invests in a wide range of bonds, gilts, equities in the UK and overseas, plus direct property. Effective from 1 April 2015, the target level of equity exposure is 10% - 20% of the overall investment.

Details of how we manage our with-profits business can be found in the Annual Report to With Profits Policyholders.

Source: Aegon. Figures in £s on a bid-to-bid basis, net of charges, with gross income reinvested to 29 February 2024. Periods of greater than one year show annualised compound returns.

Past performance is no guide to future performance. The value of this investment can fall as well as rise for a number of reasons, for example market and currency movements. You may get back less than the amount originally invested if you surrender the policy prior to the selected maturity date.

These figures represent the investment return on TWP fund net of annual management charge, but not incorporating charges for guarantees, tax and the distribution from the inherited estate (see “Enhancements to asset shares” for further information). Actual with-profits payouts also incorporate the effects of smoothing of investment returns and will therefore not necessarily reflect these returns.

*Following demutualisation on 31 December 1993, an additional special reversionary bonus was applied. This increased the attaching bonus by +5% and +10% for regular and single premium contributions respectively.

Future benefits from contributions invested are not guaranteed and depend on the bonuses declared by Aegon. The interim bonus rates for Q1 2024 are the same as those applied in 2023.

Guarantee charges and estate distribution

Amounts payable to policyholders are guided by the calculation of asset shares. This reflects the accumulation of premiums paid less any withdrawals, contract charges and expenses at the rate of investment return on the underlying with-profits fund assets.

In addition, the investment return is increased by any distributions made from the estate and decreased by charges for guarantees payable to the estate. This includes any additional enhancement to investment returns that may be added, from the estate, at the point of claim. The estate represents the excess of assets within the with-profits fund over and above the amount required to meet customer benefits. Aegon has no entitlement to any of the estate and we aim to distribute the estate equitably to with-profits policyholders over time.

The combination of these effects, plus an allowance for smoothing of investment returns, is then reflected in policy payouts through the terminal bonus and MVR rates. The following table illustrates the effect on the annual investment return from the movements to/from the estate (before any smoothing is applied).

It is important to note that the above estate distributions are not guaranteed. It may become necessary to remove some or all of these should the Scottish Equitable with-profits fund (of which this investment fund forms a part) experience adverse conditions.
